Sustainable Energy Action Plan of *Paros*

INDEX

1. INTRODUCTION
2. OVERALL OBJECTIVES. REDUCTION TARGET
3. GREENHOUSE GASES EMISSIONS INVENTORY
4. DESCRIPTION OF FINAL ACTIONS
5. SUSTAINABLE ENERGY ACTION PLAN (SEAP)
6. FUNDING RESOURCES
7. MONITORING & REVIEW

1. INTRODUCTION

The municipality of Paros taking into consideration the call of Mayors in Europe to meet and exceed the objective of reducing the emissions of carbon dioxide (CO₂) by 20% by 2020 has developed the Sustainable Energy Action Plan (SEAP). Specifically, the municipality of Paros through the implementation of SEAP aims at reducing by 20% its CO₂ emissions in 2020 compared to 2001.

The measures planned for the municipality are focused on the building sector, leading to the abovementioned target. Greek islands such as the municipality of Paros have many advantages for the implementation of sustainable energy planning, because they usually have a significant potential of renewable energy sources (wind and sun), which remains practically unexploited, whereas energy demand depends highly on imported conventional fuels. In addition, Greek islands have significant tourism related activities – many hotels are open during the summer period only - resulting in high seasonal variations in energy demand. It is important to apply energy saving measures in the building sector (municipal buildings, domestic and tertiary sector) since most of the buildings are with no thermal protection resulting in large amount of energy consumption and thus CO₂ emissions. Due to the special building regulations in the islands regarding the building facades and roofs there are restrictions on the application of renewable energy sources systems such as solar panels and PVs. Taking into account these restrictions and the high energy consumption in the building sector the main interventions refer to the building envelope and building installations for heating and cooling. So the replacement of windows (single glazing with double glazing with high thermal properties and old window frames with new high efficiency) and the installation of external thermal insulation where it is allowed and internal thermal insulation where it is feasible in the non-insulated spaces are the main energy saving measures. Regarding the installations, the old heating systems (boilers and/or heating piping systems) will be replaced with new ones of high efficiency.

The department of environment in the municipality of Paros which is involved with environmental issues will be the basis for the development of the Office responsible for the development and implementation of the sustainable energy policy as well as monitor and evaluation of the action plan.

Dissemination and raise awareness activities will take place in several places such as information days in central places (squares, shopping centers) where citizens go often, exhibitions about energy saving and RES technologies and competitions at local schools. Citizens will be also informed by the local press about the national funding opportunities for energy saving measures and RES installations (such as “Energy Saving at Home” and “PVs on roofs”)

2. OVERALL OBJECTIVES

The overall objectives of Paros' SEAP are:

- Reduction of electricity and fossil fuel consumption and thus CO₂ emissions in the domestic and tertiary sector
- Reduction of fossil fuel consumption and thus CO₂ emissions in the municipal buildings

3. GREENHOUSE GASES EMISSIONS INVENTORY

3.1 Energy consumption per sector

Figure 3.1. Final electricity consumption per sector in Paros for the year of 2001

Figure 3.2. Final heating oil consumption per sector in Paros for the year of 2001

Table 3.1. Final Energy Consumption by sector and energy source in Paros for 2001

Category	Electricity [MWh]	Heating oil [MWh]	Other biomass [MWh]
Municipal buildings, equipment/facilities	259.1	172.8	0
Tertiary (non municipal) buildings, equipment/facilities	8,143.7	4,385.1	0
Residential buildings	31,243.7	9,613.4	14,420.2
Total	39,646.5	14,171.3	14,420.2

In 2001, the total energy consumption for the building sector is 68,238.0 MWh. The most energy consuming sector is the residential buildings; it occupies 78.8% of the total electricity consumption and 67.8% of the total heating oil consumption. Due to the use of fireplaces in the residential buildings, this responds in the energy consumption of biomass (wood) of 14,420.2 MWh.

The tertiary sector occupies 20.5% of the total electricity consumption and 30.9% of the total heating oil consumption and the municipal buildings occupy 0.7% of the total electricity consumption and 1.3% of the total heating oil consumption.

Figure 3.3. Final energy consumption by energy source in Paros for the year of 2001

Regarding the distribution of energy sources consumed in the municipality of Paros in 2001, electricity (39,646.5MWh) is the most used corresponding to 58% of the total energy

consumption, heating oil (14,171.4 MWh) occupies 21% and biomass (wood) (14,420.2 MWh) occupies 21% of the total energy consumption.

3.2 CO₂ emissions per sector

Figure 3.4. CO₂ emissions for electricity by sector in Paros for the year of 2001

Figure 3.5. CO₂ emissions for heating oil by sector in Paros for the year of 2001

Table 3.2. CO₂ emissions by sector and energy source in Paros for 2001

Category	Electricity [t]	Heating oil [t]	Other biomass [t]
Municipal buildings, equipment/facilities	301,8	34,1	0
Tertiary (non municipal) buildings, equipment/facilities	9476,8	865,7	0
Residential buildings	56034,6	3801,7	1,511.7
Total	65,813.3	4,701.6	1,511.7

In 2001, the total CO₂ emissions for the building sector are 21,855.1 t. The same situation as above occurs; namely most of the CO₂ emissions derive from the residential buildings; they occupy 85.1% of the total CO₂ emissions from electricity CO₂ emissions and 80.9% of the total CO₂ emissions from heating oil. Due to the use of fireplaces in the residential buildings, this responds in the CO₂ emissions from biomass (wood) of 1511.7 t CO₂.

The tertiary sector occupies 14.4% of the CO₂ emissions from electricity and 18.4% of the total heating oil consumption and the municipal buildings occupy 0.5% of the total CO₂ emissions from electricity and 0.7% of the total CO₂ emissions from heating oil consumption.

Figure 3.6. CO₂ emissions resulted from the energy sources in Paros for the year of 2001

Regarding the distribution of CO₂ emissions in the municipality of Paros in 2001, emissions from electricity (65,813.3 t) occupy the largest portion which is 91%; whilst CO₂ emissions from heating oil (4,701.6 t) occupy 7% and biomass (wood) (1511.7 t) occupy 2% of the total CO₂ emissions.

4. DESCRIPTION OF FINAL ACTIONS

Category	Action	Estimated cost [€]	Expected energy saving [MWh/a]	Expected CO ₂ reduction [t/a]
BUILDINGS, EQUIPMENT / FACILITIES & INDUSTRIES:				
<i>Municipal buildings</i>	Action 1: Replacement of windows (single glazing with double glazing with high thermal properties and old window frames with new high efficiency) Action 2: Installation of external thermal insulation where it is allowed and internal thermal insulation where it is feasible in the non-insulated spaces Action 3: Replacement of the old heating systems (boilers and/or heating piping systems) with new ones of high efficiency	1: 167400.0 2: 78120.0 3: 39060.0	1: 43.2 2: 21.6 3: 12.8	1: 14.0 2: 7.0 3: 3.4
<i>Tertiary (non municipal) buildings</i>	Action 1: Replacement of windows (single glazing with double glazing with high thermal properties and old window frames with new high efficiency) Action 2: Installation of external thermal insulation where it is allowed and internal thermal insulation where it is feasible in the non-insulated spaces Action 3: Replacement of the old heating systems (boilers and/or heating piping systems) with new ones of high efficiency	1: 1503810.0 2: 701778.0 3: 526334.0	1: 877.0 2: 438.5 3: 170.4	1: 289.2 2: 144.6 3: 45.5

5. SUSTAINABLE ENERGY ACTION PLAN (SEAP)

Cofinanced by the European Regional Development Fund - MED Programme
www.medzeroco2.eu

Sustainable Energy Action Plan (SEAP) template

*This is a working version for Covenant signatories to help in data collection. However the on-line SEAP template available in the Signatories' Corner (password restricted area) at: <http://members.eumayors.eu/> is the only **REQUIRED** template that all the signatories have to fill in at the same time when submitting the SEAP in their own (national) language.*

OVERALL STRATEGY

1) Overall CO₂ emission reduction target

(%) by 2020

Please tick the corresponding box:

- ☒ Absolute reduction
☐ Per capita reduction

2) Long-term vision of your local authority (please include priority areas of action, main trends and challenges)

Reduction of CO₂ emissions in the building sector of the municipality (tertiary, domestic and municipal buildings)

3) Organisational and financial aspects

Coordination and organisational structures created/assigned	The department of environmental issues in the municipality of Syros was involved and the Centre for Renewable Energy Sources and Saving (CRES) was responsible for the development of the SEAP
Staff capacity allocated	The department of environmental issues in the municipality of Syros will be the basis for the development of the Energy Office responsible for the development and implementation of the sustainable energy policy as well as monitor and evaluation of the action plan.
Involvement of stakeholders and citizens	The involvement of stakeholders and citizens will be achieved through their participation in the Energy Office
Overall estimated budget	32146065,7
Foreseen financing sources for the investments within your action plan	National Strategic Reference Framework (NSRF), Operational Programme "Environment and Sustainable Development" (EPPERAA), Strategic Plans for Development of South Aegean Region 2011-2020
Planned measures for monitoring and follow up	The energy consumption of the relevant sectors will be calculated and compared every two years so as to evaluate the effectiveness of the actions undertaken and to revise them if needed.

Sustainable Energy Action Plan (SEAP) template

BASELINE EMISSION INVENTORY

1) Inventory year

 [Instructions](#)

For Covenant signatories who calculate their CO2 emissions per capita, please precise here the number of inhabitants during the inventory year:

2) Emission factors

Please tick the corresponding box:

- ☒ Standard emission factors in line with the IPCC principles
☐ LCA (Life Cycle Assessment) factors

Emission reporting unit

Please tick the corresponding box:

- ☒ CO2 emissions
☐ CO2 equivalent emissions

3) Kev results of the Baseline Emission Inventory

Green cells are compulsory fields

Grey fields are non editable

A. Final energy consumption

Please note that for separating decimals dot [.] is used. No thousand separators are allowed.

Category	FINAL ENERGY CONSUMPTION [MWh]															
	Electricity	Heat/cold	Fossil fuels								Renewable energies					Total
			Natural gas	Liquid gas	Heating Oil	Diesel	Gasoline	Lignite	Coal	Other fossil fuels	Plant oil	Biofuel	Other biomass	Solar thermal	Geothermal	
BUILDINGS, EQUIPMENT/FACILITIES AND INDUSTRIES:																
Municipal buildings, equipment/facilities	259,1				172,8											
Tertiary (non municipal) buildings, equipment/facilities	8143,7				4385,1											
Residential buildings	31243,7				9613,4								14420,2			
Municipal public lighting																
Industries (excluding industries involved in the EU Emission trading scheme - ETS)																
Subtotal buildings, equipments/facilities and industries	39646,5				14171,3								14420,2			
TRANSPORT:																
Municipal fleet																
Public transport																
Private and commercial transport																
Subtotal transport																
Total	39646,53				14171,28											

Municipal purchases of certified green electricity (if any) [MWh]:

CO2 emission factor for certified green electricity purchases (for LCA approach):

B. CO2 or CO2 equivalent emissions

Please note that for separating decimals dot [.] is used. No thousand separators are allowed.

Category	CO2 emissions [t]/ CO2 equivalent emissions [t]															
	Electricity	Heat/cold	Fossil fuels								Renewable energies					Total
			Natural gas	Liquid gas	Heating Oil	Diesel	Gasoline	Lignite	Coal	Other fossil fuels	Biofuel	Plant oil	Other biomass	Solar thermal	Geothermal	
BUILDINGS, EQUIPMENT/FACILITIES AND INDUSTRIES:																
Municipal buildings, equipment/facilities	301,8				34,1											
Tertiary (non municipal) buildings, equipement/facilities	9476,8				865,7											
Residential buildings	56034,6				3801,7								1511,7			
Municipal public lighting																
Industries (excluding industries involved in the EU Emission trading scheme - ETS)

6. FUNDING RESOURCES

The municipal of Paros will search for funding under the operational Programme “Environment and Sustainable Development”. In addition there are national programmes targeted at the domestic sector. The Programme ‘Energy Saving at Home’ has been announced, by the Ministry of Environment, Energy and Climate Change, in July 2010. The Programme foresees financial incentives for energy refurbishment of private residential buildings. It provides low interest rate loans, (or no interest rate) combined with subsidies, depending on the income of the applicant, for thermal insulation of the building shell, window replacement and upgrading of the heating system.

In addition, the Programme “PVs on roofs” has been announced by the Ministry of Environment, Energy and Climate Change, in June 2009 promotes the installation of photovoltaic panels with power less than 10 kW on roofs of buildings of domestic and tertiary sector.

7. MONITORING & REVIEW

The Energy Office will undertake the monitoring and review of the sustainable energy action plan. The Office will consist of representatives from the local government (department of environmental issues) and from the local associations in order to be ensured the participation of the main local stakeholders.

The energy consumption of the relevant sectors will be monitored and compared every two years so as to evaluate the effectiveness of the actions undertaken and to revise them if needed.
